McKenzie River Ranger District

Ollie TS Logging System Report
Unit: 1 (Gaps 2 & 3)
T15S R7E Section 7, 8, 17, & 18
Elevation: 2720'
Slope %: 15-45

Prescribed System
S - 47 acres

Units 1 (43 acres), 2 (2 acres), and 3 (2 acres) are proposed as skyline logging and can be yarded to the gated 2654834 road. The average yarding distance is approximately 500 feet. Due to the overall yarding lengths, prebunching of timber to the skyline corridors is recommended along the southern portion of the unit on ground less than 45% slope. This would also help in the area where blind corners exist. The prebunching of the timber can then be skyline yarded to the 2657834. If skyline yarding requires corridors through the no-harvest buffer; the corridors would be laid out to result in the least number of trees to be cut. Trees located within the no-harvest buffer that must be cut for operations would be felled and left on site. There are no proposed temporary roads in this sale.
